

I have a lot of favorite foods. One of them is shawarma. Shawarma is a popular around the world because of its deliciousness and of rich flavours it has. There's a lot of variations of this dish which is sea-food shawarma, vegetarian, spicy and etc. but my favorite is traditional shawarma with chicken meat. Although shawarma is an easy snack to make (but) it is not healthy. The meat contains fat that might be staying on cone for a long time. Shawarma is still a tasty dish that contains tomatoes, pickles or cucumbers, fries, different sauces, carrots, cabbages that makes a perfect combination and surprises your taste buds. Shawarma is one of the popular street foods in the world. Especially in Middle East and Central Asia so it's very affordable in our hometown. In conclusion I want to add that everyone should have a taste of shawarma because it might be one of your favorite foods! But not eat it too frequently, it's not healthy.
